

## **4GELA: Presentation about the work done for the project in the previous months**

The Erasmus Program has one main purpose: to build bridges and bring together Schools from all over the globe in order for students and teachers to discuss subjects of high interest no matter the country and language.

Between our last meeting which was in October in Regua AEJAC and now the team of Erasmus of our school has been getting more information on our current subject which is “School Mediation in Practice, Bullying and Cyberbullying inside schools and outside schools”. As soon as we came back from Regua we got concentrated on collecting, archiving, uploading and disseminating all the C3 4GELA stuff. In the meanwhile the good news arrived: [Theophano’s article on active citizenship](#) was meant to be elected and published in the EU platform SchoolEducationGateway on January 2022 under the general thematic period “[Young citizens in action](#)”.

In the meanwhile Mrs. Aliki Giatra started training the new students of A class on School Mediation Peer-to-Peer. A few days later we started discussing about the C5 mobility issue. And we arrived in thinking about a role-play simulating a real bullying case in our school. And we started composing the storytelling taking for granted that this is a real incident. After composing the story we were up to video recording it and then the snowstorm situation visited us in South Europe, Athens, quite a new and unknown arrival, and the school was closed for almost 10 days with distance learning classes not always feasible because of the bad weather. When back finally, we started again preparing our stuff for the meeting which unfortunately was meant to take place virtually.

In the meanwhile our school’s Principal arrived at an agreement with the local authorities on lodging at our school a School Mediation Training Center at which teachers of the local school society and beyond could apply for being trained and getting accreditation by special experts on school mediation peer-to-peer.

We also prepared the mediation training classroom with a prize award due to Vaia’s digital skills who won the [1st digital poster prize](#) in a local students’ contest on recycling /environmental crisis: an Interactive Whiteboard!

Furthermore since we are jointed in a partnership/consortium with a local public school upper

secondary, “the Stroggylo, 1st General Lykeion of Saint Dimitrios”, which is also implementing an Erasmus+ plus project “[Cyber Security in Schools](#)” we were allowed to borrowing their google form contest for the best poster to be elected on demand as an experiential gaming activity among all partners and students of ours during the C5 online mobility.
